

**AMENDMENTS TO THE SPECIFICATION**

Please replace the paragraph on page 6, beginning on line 4 with the following:

According to an advantageous embodiment, the two bags are combined with a single ring for fastening to the container and to the pumps, and they may be formed as a single piece, in the form of a double bag comprising two compartments separated by a partition (Figure 4). This double-bag embodiment has the advantage that it stiffens the structure of the bag by means of the separating partition, which simplifies the replacement of the products contained in the bags. The bags may be fastened by any known means, for example by snapping their necks onto the ring.

Please insert the following new paragraph on page 11, between the paragraph ending on line 33 and the paragraph starting on line 35:

Figure 4: a sectional view of another variant of the device, in which the two bags are formed a single piece, in the form of a double bag comprising two compartments separated by a partition.
